Key findings

The total turnover of annual financial statistics (AFS) industries¹ was estimated at R10 496 685 million (R10,5 trillion) for 2019, an increase of 5,6% compared with the revised estimate of R9 942 461 million (R9,9 trillion) for 2018.

Between 2018 and 2019 turnover increased in all of the nine industries covered by the survey. The largest percentage increase was reported in mining and quarrying (+12,4%), followed by activities auxiliary to financial intermediation, real estate and other business services² (+7,8%), forestry and fishing (+7,6%), manufacturing (+7,2%), community, social and personal services³ (+4,8%), electricity, gas and water supply (+4,0%), transport, storage and communication (+3,9%), trade (+3,7%) and construction (+1,1%).

Purchases amounted to R6 254 177 million in 2019, representing an increase of 6,6% compared with the revised estimate for 2018. Electricity, gas and water supply reported the largest increase (+20,1%), followed by mining and quarrying (+16,9%), forestry and fishing (+9,9%), activities auxiliary to financial intermediation, real estate and other business services² (+9,3%), manufacturing (+8,1%), community, social and personal services³ (+6,0%), trade (+4,8%), transport, storage and communication (+3,6%) and construction (+1,3%).

Employment cost amounted to R1 438 621 million in 2019, representing an increase of 3,6% compared with the revised estimate for 2018. Electricity, gas and water supply reported the largest increase (+12,1%), followed by community, social and personal services³ (+8,1%), mining and quarrying (+5,7%), trade (+4,7%), manufacturing (+3,6%), forestry and fishing (+3,1%), activities auxiliary to financial intermediation, real estate and other business services² (+2,0%) and transport, storage and communication (+1,7%). A decrease was reported for construction (-2,0%).

Capital expenditure on assets amounted to R475 732 million in 2019, representing a decrease of 3,3% compared with the revised estimate for 2018. The largest decrease was reported for electricity, gas and water supply (-27,7%), followed by construction (-23,7%), transport, storage and communication (-4,9%), trade (-1,1%) and forestry and fishing (-0,6%). Increases were reported for mining and quarrying (+12,9%), community, social and personal services³ (+9,5%), manufacturing (+4,1%) and activities auxiliary to financial intermediation, real estate and other business services² (+0,3%).

The carrying value of property, plant and equipment and intangible assets amounted to R3 407 427 million in 2019, a decrease of 0,7% compared with the revised estimate for 2018. The largest decrease was reported for electricity, gas and water supply (-13,2%), followed by community, social and personal services³ (-2,3%) and transport, storage and communication (-0,4%). Increases were reported for forestry and fishing (+11,7%), construction (+10,8%), mining and quarrying (+6,9%), manufacturing (+6,9%), activities auxiliary to financial intermediation, real estate and other business services² (+6,8%) and trade (+0,2%).

¹All industries in the South African economy, excluding agriculture, hunting, financial intermediation, insurance, pension funding, other business services not elsewhere classified, government and educational institutions.

²Excluding financial intermediation, insurance, pension funding and business services not elsewhere classified.

³Excluding government and educational institutions.

Technical notes

Confidence intervals

The 95% confidence intervals of a population parameter (turnover) are obtained as follows:

Lower limit

= lower 95% confidence limit of a population parameter
= estimate – 1,96* standard error (estimate);

and

Upper limit

= upper 95% confidence limit of a population parameter
= estimate + 1,96* standard error (estimate).

Standard error (SE)

Standard error = $\frac{\text{Upper limit (R million)} - \text{Lower limit (R million)}}{2 * 1,96}$

Relative standard error (RSE)

$RSE = \frac{SE(\text{estimate}) * 100}{\text{estimate}}$

The estimates contained in this publication are based on information obtained from a sample drawn from units in the surveyed population. The estimates are subject to sampling variability. That is, they may differ from the figures that would have been produced if all units had been included in the survey.

One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of units was included. The relative standard error (RSE) provides an immediate indication of the percentage errors likely to have occurred due to sampling.

Neyman optimal allocation

Enterprises on the business sampling frame are placed into strata, since a stratified sample design is used. Each stratum contains two parts of information, viz. the industrial sector (primary stratum) to which an enterprise belongs and the size group (secondary stratum) to which an enterprise is assigned. The industrial sector is derived from the SIC (Standard Industrial Classification) variable and the size group is based on a measure of size (turnover). The Neyman optimal allocation formula used to allocate samples to each stratum is given by the formula below:

$$n_h = \frac{N_h S_h}{\sum N_h S_h}$$

Where N_h and S_h are the stratum population size and the stratum standard deviation, respectively.

Explanatory notes

Background

Stats SA conducts the *Annual financial statistics* (AFS) survey to collect a range of financial statistics in respect of enterprises in the formal business sector of the South African economy, excluding agriculture and hunting services, financial intermediation, insurance, pension funding and business services not elsewhere classified, government and educational institutions.

Information is collected for the financial year of enterprises that ended on any date between 1 July of a particular year and 30 June of the following year. The primary goal of the survey is to provide inputs to the GDP estimates. The AFS can be used independently for industry analyses from both an accounting and econometric perspective. Other users include the South African Reserve Bank, government organisations, researchers and academics.

The statistical release contains information regarding:

- income and expenditure items;
- inventories;
- net profit before providing for company tax and dividends;
- company tax paid or provided for during the financial year;
- dividends paid or provided for during the financial year;
- statement of financial position items;
- property, plant and equipment and intangible assets;
- selected operating ratios; and
- population size of enterprises per industry.

Additional information available on the Stats SA website includes:

- time series estimates per industry;
- estimates by business size per industry; and
- disaggregated industry estimates.

Purpose of the survey

The purpose of the AFS is to derive a set of measures of industry performance based on information available from the financial statements of enterprises. Results of the survey are used in compiling estimates of the annual gross domestic product (GDP) and its components, which in turn are used to develop and monitor government policy. The statistics are also used by the private sector in analyses of comparative industry performance. Enterprises can assess their own performance against that of their industry, in terms of a range of operating ratios. The results are published annually in statistical release P0021: *Annual financial statistics*.

Scope of the survey

The AFS survey covers financial statistics of the following industries according to the *Standard Industrial Classification of all Economic Activities* (SIC), Fifth edition, January 1993:

- forestry and fishing;
- mining and quarrying;
- manufacturing;
- electricity, gas and water supply;
- construction;
- trade;
- transport, storage and communication;
- activities auxiliary to financial intermediation, real estate and other business services (excluding financial intermediation, insurance, pension funding and business services not elsewhere classified); and
- community, social and personal services (excluding government and educational institutions).

Classification	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities (SIC)</i> , Fifth edition, <i>January 1993</i> , was used to classify the enterprises in the survey. The SIC is based on the <i>1990 International Standard Industrial Classification of all Economic Activities (ISIC)</i> with suitable adaptations for local conditions. Statistics in this publication are only presented at industry level, i.e. one digit level (SIC major division). Each enterprise is classified to an industry which reflects the predominant activity of the enterprise.
Collection rate	The preliminary collection rate for the AFS 2019 survey was 76,1%. The revised collection rate for AFS 2018 was 84,2% and the preliminary collection rate for AFS 2018 was 83,8%.
Statistical unit	The statistical unit for the collection of information in this survey is the enterprise, defined as a legal unit (or combination of legal units) that includes and directly controls all functions necessary to carry out its activities.
Survey methodology and design	The survey is conducted annually. All enterprises are first stratified by the predominant type of activity according to the SIC, then by size, using turnover as a measure of size. All enterprises in the size group representing the largest enterprises according to turnover were selected. These large enterprises accounted for approximately 39% of the total sample. For medium and small enterprises, samples were drawn by randomly selecting the allocated number of enterprises within the other size groups and each industry. A sample of 12 867 enterprises was drawn for the AFS 2019. The data reported by enterprises in the sample are weighted to represent all enterprises in the population. Weights for size groups 2 to 4 can be large due to sample design and non-response.

Main reasons for fluctuations

Fluctuations between the AFS 2018 and AFS 2019 estimates can be attributed to numerous factors, the more prominent being:

- the sample population and composition between 2018 and 2019 are not necessarily comparable;
- restating of previous estimates due to International Financial Reporting Standards (IFRS);
- revisions to the previous year made in the event of new or revised information being furnished by the respondents;
- restructuring of large businesses;
- exchange rate changes;
- changes in the classification of enterprises to different industries; and
- the cut-off points for different industries may vary from year to year.

Differences in accounting policy and practices across businesses and industries can also lead to some inconsistencies in the data used to compile the estimates. While much of the accounting process is subject to standards, there remains a great deal of flexibility available to businesses in the accounting policies and practices they adopt.

The imprecision due to sampling variability, which is measured by the standard error, is not to be confused with inaccuracies that may occur because of inadequacies in available sources from which the population frame was compiled, imperfections in reporting by providers, errors made in collection and errors made in processing data. Inaccuracies of this kind are collectively referred to as non-sampling error and they may occur in any enumeration, whether it is a full count or a sample.

While it is not possible to quantify non-sampling error, every effort is made to assist businesses to complete questionnaires accurately. Efficient and effective operating procedures and systems are used to compile the statistics.

Closing (2018) and opening (2019) values of inventory and carrying values of property, plant and equipment and intangible assets do not correspond due to non-overlapping enterprises between the two samples and other sampling factors. Thus, differences in closing 2018 values and the opening 2019 values will be reflected in all the industries.

The above factors are not meant to imply that analyses based on these data should be avoided, only that they should be borne in mind when interpreting the data presented in this publication.

Comparison of results with the *Quarterly financial statistics* (QFS) survey and monthly surveys

The AFS may not necessarily be comparable with other Stats SA surveys due to various factors, including:

- classification differences between survey periods;
- restructuring of businesses;
- different cut-off points for size groups; and
- different sampling specifications.

**Comparison of results
with *Quarterly
employment
statistics* (QES)
survey**

Employment cost estimates produced in this publication are based on information as defined by the International Accounting Standards 19 (IAS19) from an accounting perspective. The *Quarterly employment statistics* (QES) survey produces estimates for employment and earnings from a payroll perspective.

The differences between the AFS employment cost and QES earnings can be attributed but not limited to:

- accounting and payroll timing differences in the recognition of employment-related transactions;
- classification differences between surveys;
- different sampling frames;
- different sampling methodology and sampling specifications;
- definitional issues;
- information sources (information from the payroll administrator vs. information from the accounting officer); and
- restructuring of businesses.

Rounding off

Where figures have been rounded off, discrepancies may occur between the sums of the component items and totals.

Glossary

Additions	The acquisition of land, property, plant and equipment and intangible assets. This comprises capital expenditure on new and existing assets.
Carrying value of property, plant and equipment and intangible assets	Carrying value of property, plant and equipment and intangible assets is the value at a specific time after deducting depreciation, amortisation and adjustments from the original cost. Carrying value of property, plant and equipment and intangible assets includes: • land and land improvements; • residential and non-residential buildings; • construction works, roads, parking areas and leasehold improvements; • network equipment; • computers and other information technology (IT) equipment; • motor vehicles, trucks, aircrafts, boats, trailers, locomotives and other transport equipment; • plant, machinery, furniture and fittings, tools, earthmoving equipment, furnaces, kilns, containers, fax machines, printers and copiers; • capital work in progress (tangible and intangible); • other property, plant and equipment; • computer software and databases; • mineral exploration and evaluation; • patents and trademarks; • goodwill and marketing assets; • research and development; • entertainment, literary and artistic originals; • contracts, leases and licences; and • other intellectual property products.
Company tax paid or provided	Company tax brought into account consists of taxes on incomes, profits and capital gains, excluding value added tax (VAT). They are assessed on the actual or presumed incomes of enterprises and exclude employees' taxes and compulsory loan levies.
Current assets	These are assets which can be converted into cash within 12 months. They include: • trade and other receivables; • cash and cash equivalents; • inventory; and • other current assets.
Current liabilities	Current liabilities are debts or obligations that are due within 12 months. They include: • trade and other payables; • bank overdraft; and • other current liabilities.
Disposal of assets	The sale or retirement of land, property, plant and equipment and intangible assets.
Dividends paid	Dividends paid include cash dividends and other dividends such as capitalisation issues or scrip dividends or capitalisation shares.

Employment cost	Employment cost includes: • salaries and/or fees paid to directors, executives and managers; • commission paid if a retainer, wage or salary was also paid; • employer's contribution to pension, provident, medical aid, sick pay and other funds; • payments made from South Africa to employees based abroad; • payments for all types of leave; • fringe benefits paid in cash; • allowances and penalty payments; • severance, termination and redundancy payments to staff; • bonuses; and • employee share-based payment expenses.
Enterprise	An enterprise is a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its activities.
Equity	Equity is the residual interest in the enterprise's assets after deducting its liabilities.
Government institutions	The AFS excludes general government institutions, which consist of: • national government; • provincial government; • local government; • extra-budgetary accounts and funds; and • public financial corporations.
Industry	An industry consists of a group of enterprises engaged in the same or similar kinds of economic activity, and is classified according to the Standard Industrial Classification of all Economic Activities (SIC), Fifth edition, January 1993.
Intangible assets	An intangible asset is an identifiable non-monetary asset without physical substance held for use in the production or supply of goods or services.
Interest	The price paid for the use of borrowed money or money earned by deposited funds.
International Financial Reporting Standards (IFRS)	International Financial Reporting Standards (IFRS) are international accounting standards stating how particular types of transactions and other events should be reported in financial statements. IFRS are issued by the Accounting Standard Board. The purpose of IFRS is to improve transparency and comparability within financial reporting and introduce consistency in accounting.
Inventories	Inventories at year end include: • raw materials or materials for processing, packaging materials, fuel, consumable and maintenance stores; • work in progress (partially completed); and • finished goods (own manufactures) and finished goods not produced by the enterprise but purchased for resale.
Net profit after tax	Net profit after tax is net profit or loss less company tax paid or provided for during the financial year.
Net profit before providing for company tax and dividends	The net profit or loss of an enterprise prior to providing for tax and dividends is calculated as total income less total expenditure less opening value of inventories plus closing value of inventories.

Non-current assets	Non-current assets are assets not expected to be converted into cash, sold or exchanged within the normal 12-month operating cycle of the enterprise. They include: • property, plant and equipment and intangible assets; • long-term investments; and • other non-current assets.
Non-current liabilities	Non-current liabilities are liabilities that are not required to be paid within 12 months. They include: • long-term loans; and • other non-current liabilities.
Other expenditure	Other expenditure includes: • cleaning services; • professional services, e.g. audit and other professional business services, management and administration fees, legal expenses and data processing services; and • subscriptions.
Property, plant and equipment	Property, plant and equipment are tangible assets that an enterprise holds for its own use and expects to use during more than one financial year.
Purchases	Purchases include: • raw materials, components and consumables used in production; • fuel and spare parts for vehicles and off-road vehicles; • purchases and transfers-in of finished goods, intermediate products and partially completed goods from related enterprises; and • goods for resale.
Rental of land, buildings and other structures	Rental of land, buildings and other structures includes water and electricity services paid.
Statement of financial position	A financial statement that summarises a company's assets, liabilities and shareholders' equity at a specific point in time.
Turnover	Turnover includes: • sales of goods; • services rendered; • leasing and hiring of motor vehicles and other transport equipment under operating leases; • leasing and hiring of plant, machinery and equipment; • mineral rights leased; and • rental and leasing of land, buildings and other structures under operating leases. Turnover for only South African-based activities of the enterprise is reflected in this publication.
Value-added tax (VAT)	VAT is an indirect tax which is levied on goods and services. AFS estimates exclude VAT.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis where applicable result from their own processing of the data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Mbombela
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact 012 310 8600.
